FT3
Precision Thickness Gauge

- Accurate and repeatable thickness measurements
- Compliant to multiple standards
- Choice of configuration
The IGT FT3 Precision Thickness Gauge quickly and precisely measures the thickness of a variety of materials.

Accurate & repeatable thickness measurements can improve product quality whilst controlling the costs associated with raw material usage.

The accuracy of thickness measurement is determined by several key operating factors, the IGT precision thickness gauge works within the following measurement parameters –
Up Time: This parameter allows the user to manipulate samples between measurements. 1-10 sec

Speed of measurement: The speed of the measurement head is especially important when measuring deformable materials. 1-5mm/sec

Dwell/Down Time: The dwell time determines the settling time of the measuring head on compressible materials. 1-15 sec

The instrument is operated via an integral touch screen and features different measurement modes.

Standard Test: Full statistical analysis of up to 500 readings.

Batch Test: Calculates the thickness difference between two measurement sets, used to assess the thickness of coatings, adhesives or sample batches.

Standard Tare Test: Automatically tares the instrument before each test using user defined conditions.

Physical test parameters can be factory configured according to International Standards or customer requirements. Measurement speed and dwell time are controlled by user defined parameters.

The instrument is linearised throughout its measurement range using a multi point calibration.

Flatness of measurement head/anvil <0.1μm

Typical parallelism <1μm

The IGT instrument provides full statistical analysis of data. The optional printer allows a time/date stamped results label to be attached to job sheet or retained samples.

User defined routines or the optional footswitch mean hands free operation for easy sample manipulation.

Temperature stability circuitry ensures the instrument electronics reach optimum conditions before testing.

Pass/Fail Test: Enter the target thickness with percentage tolerance. Results are displayed with a PASS or FAIL.

Measurements made using the FT3 thickness gauge can be exported to Microsoft Excel® via interface software.

All measured and calculated parameters are transferred along with the date / time stamp, instrument serial number and calibration date.

*sample excel sheets available on request
AVAILABLE CONFIGURATIONS

► FT3: Standard Instrument
Fixed pressure, factory configured to meet a single test standard or specification of your choice.

► FT3-V: Variable Instrument
Test pressure is varied by adding additional weights to the instrument platform.
Factory configured measurement head size.
One external weight is included to achieve compliance to a second measurement standard or assess material compressibility.
Additional external weights can be applied to increase measurement pressure up to 4kg total.

► FT3-U: Ultra High Precision Instrument
Fixed pressure configured to meet a single test standard or specification.
Enhanced resolution of 0.01m for applications requiring ultra high precision.
Factory configured measurement mass between 50g and 500g available.
Measurement Head: 25.5mm radius domed.
Custom radius domed heads available on request.

► FT3-LAB: Laboratory Instrument*
Test pressure is varied by adding extra weights to the instrument platform or changing the size of the measurement head.
Two external weights and one additional measuring head included to achieve compliance to multiple standards or customer specifications.

*NB: This product is suitable for use by test and calibration laboratories as full re-calibration is required between measurement head changes.

## STANDARDS

The instrument can be configured to meet any of the standards listed below:

### PLASTIC FILM
- BS 2782-6 Methods of testing plastics. Dimensional properties. Determination of thickness by mechanical scanning of flexible sheet
- DIN 53370 Testing of plastics films – Determination of the thickness by mechanical scanning
- ISO 4593 Plastics – Film and sheeting – Determination of thickness by mechanical scanning
- ASTM D6988 Standard Guide for Determination of Thickness of Plastic Film Test Specimens

### PAPER & BOARD
- ISO 534 Paper and board. Determination of thickness, density and specific volume
- DIN 53105
- BS EN 20534 Method for determination of thickness and apparent bulk density or apparent sheet density of paper and board
- TAPPI T 411 Thickness of Paper and Paperboard (Soft Platen Method), Test Method T 551 om-06
- SCAN P7
- SCAN P31
- FEFCO No 3
- ISO 3034 Corrugated fibreboard. Determination of single sheet thickness
- BS 4817 Method for the determination of the thickness of corrugated fibreboard
- BS EN 12625-3 Tissue paper and tissue products. Determination of thickness, bulking thickness and apparent bulk density.
- SCAN P47
- BS 7387 Method for determination of the bulking thickness, apparent bulk density, compressibility and compressibility index of soft creped tissue paper.

### TEXTILE
- ISO 5084 Determination of thickness of textiles and textile products.
- ASTM D5199 Thickness of geosynthetic material (HDPE Geomembranes).

### GASKETS
- ASTM F36 Standard test method for compressibility and recovery of gasket materials.

### FLOOR COVERINGS
- EN428 Resilient floor coverings. Determination of overall thickness.

### FLEXIBLE PACKAGING
- ASTM F2251 Standard test method for thickness measurement of flexible packaging material.

### TAPE
# FT3 Precision Thickness Gauge

## Configurations

Each standard of compliance specifies a different pressure which is calculated by the force applied to the sample through a measuring head of a given diameter.

**FT3**  
Single standard of compliance. Fixed pressure measurements.

**FT3-20**  
As per FT3 but with extended 19mm measuring range.

**FT3-V**  
1+ standard(s) of compliance. Pressure varied by adding additional weight to the measurement platen.

**FT3-V20**  
As per FT3-V but with 19mm measuring range.

**FT3-LAB**  
Compliance to multiple standards. Pressure is varied by adding additional weight to the platen and by changing the measuring head*.

**FT3V20-LAB**  
As per FT3V-Lab but with 19mm measuring range.

**FT3-U**  
ISO 4593 standard of compliance. Fixed pressure.  
*suitable for use in R & D environments or by testing laboratories.

To request a quotation, please choose the model of instrument desired and mail to IGT, providing the standard(s) of compliance and the base size required (large or small).

*Dependant on operating conditions and configuration of instrument

## Optional Accessories

- **Results printer**  
  Simple reporting of results which can be attached to retained samples

- **Data transfer software**
